

## DYNAC™ CCTV

### Overview

The **CCTV** application allows operators to securely monitor and control their facilities from a single workstation. From DYNAC™, users are able to send video switching, pan, tilt and zoom commands to CCTV system cameras. DYNAC™ polls the CCTV system for video alarms and sends commands to the CCTV to initiate preprogrammed video tours.

### Features:

- Intuitive graphical user interface allows user to select and program camera pre-shots and tours
- Automatic user notification of video alarms
- Pan, tilt, and zoom commands for optimum monitoring of facilities
- Manual or automated control of cameras or monitors for added flexibility
- User friendly GUI for selecting a camera for a given monitor
- Simultaneously controls multiple brands of CCTV cameras
