

We are a leading systems integrator of control, communication, information management and security/ surveillance systems. For over 30 years, we have delivered a wide-range of systems for government agencies and private industry in the transportation, environmental, energy, and industrial markets throughout the United States and abroad.

For more than a quarter of a century, leading municipalities, utilities, and environmental agencies throughout the United States have relied on Transdyn to design and build systems for their vital facilities and operations. We have partnered with customers such as the City of San Francisco and New York City's Department of Environmental Protection to deliver some of the most important environmental management systems in the world. From water filtration and distribution to wastewater treatment and collection to organic fertilizer production, we have unmatched experience delivering cost-effective solutions tailored to our customers' operations.

## SCADA

From the early days of tone telemetry to today's latest technologies, we have worked with leading government agencies and utilities to design and build some of the largest and most sophisticated SCADA systems in the world. Agencies like New York City's Department of Environmental Protection use Transdyn systems to safely and effectively manage their

stormwater pumping and vital watershed areas.

We have expertise with all types of SCADA communication technologies from leased line to the latest Ethernet based wireless wide area networks. We combine this experience with the latest cyber security practices to build high-performance, highly secure systems.

## Water Treatment and Distribution

We provide systems and services to help water utilities use the latest technology and O&M practices to cost-effectively produce clean and safe drinking water. Our control system engineers and automation specialists offer expertise on all types of latest water treatment and distribution automation, optimization, information

management, and data reporting solutions that allow our clients more safely, efficiently, and securely operate their critical facilities.

From system design to maintenance, we provide a full spectrum of services for all sizes or complexity of water treatment and distribution system projects.

## Wastewater Treatment

We work with environmental agencies to design and build highly automated distributed control systems that manage all aspects of plant operations. We provide a complete range of technical solutions and services that result in more flexible, reliable and cost effective systems. These systems are integrated with the latest

information management tools, such as data warehousing, to meet stringent data retention and water quality reporting demands.

Based on almost 30 years of long standing relationships with wastewater treatment agencies, we offer the expertise needed to ensure that agencies meet their water quality goals.

## Operations & Maintenance

Transdyn's commitment to its customers does not stop with the installation and commissioning of a system. Our Field Service Department provides operations support, software support, and equipment repair and

maintenance services throughout the United States and abroad. We offer contracts ranging from business hours telephone support to 24x7 on-site operations and maintenance.
